

AFOMA EGBUONU

DevOps Engineer & Cloud Infrastructure Specialist

Lagos, Nigeria (UTC+1) | +234 803-253-9843 | afomaegbuonu@gmail.com | linkedin.com/in/afoma-egbuonu-a0304a43

PROFESSIONAL SUMMARY

DevOps Engineer and Repository Manager with hands-on ownership of production cloud infrastructure for a live EdTech platform on Microsoft Azure. Experienced across the full infrastructure lifecycle: provisioning with Terraform, container orchestration on Kubernetes (AKS/EKS), CI/CD pipeline design (Azure Pipelines, GitHub Actions, ArgoCD), and GitOps-based release management. Comfortable owning repository and access governance for a multi-contributor engineering team, and diagnosing infrastructure issues directly from logs, quota errors, and pipeline failures rather than documentation alone. Builds automated, reliable, and observable systems — and increasingly integrates agentic AI tooling (Claude Code, MCP) into DevOps workflows to move faster without cutting corners.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure (App Service, AKS, MySQL Flexible Server, Blob/Media Storage, Azure Pipelines), AWS (EKS, EC2, ECR), GCP (foundational)

Containers & Orchestration: Docker, Kubernetes, Helm, ArgoCD (GitOps), multi-stage builds, autoscaling & LoadBalancer configuration

Infrastructure as Code: Terraform (multi-resource provisioning, state & module design), Ansible

CI/CD: Azure Pipelines (self-hosted agents), GitHub Actions, Jenkins fundamentals, pipeline debugging & YAML authoring

Monitoring & Observability: Prometheus, Grafana, Zipkin, Datadog fundamentals

Version Control & Repo Management: Git, GitHub (organization & access management, PR-gated review workflows)

Databases: MySQL, MySQL Flexible Server (Azure)

Security & Reliability: Cloud security fundamentals, secure config & access control, incident troubleshooting

AI-Augmented DevOps: Claude Code, MCP servers, agentic AI workflows for infrastructure automation

Project & Team Tools: Jira, Linux, WSL2, Git Bash, technical documentation, cross-functional collaboration

PROFESSIONAL EXPERIENCE

DevOps Engineer & Repository Manager | Ibeya International R&D Apr 2026 – Present

Owns cloud infrastructure and repository governance for Awas—ExamPrep Nigeria, an EdTech platform on Microsoft Azure

- Designed and provisioned the full Azure infrastructure for the **ExamPrep Nigeria** platform end-to-end using Terraform: App Service hosting for a Python backend and React frontend, MySQL Flexible Server, and a dedicated media storage account for exam content
- Act as sole **repository manager** for the Awas GitHub organization, gating all database schema changes through pull-request review before merge
- Diagnosed and resolved live infrastructure blockers, including Azure region VM quota limits, MySQL engine version mismatches, and multi-line Terraform block/backup syntax errors
- Manage onboarding and access for a small distributed engineering team operating under shared GitHub seats, balancing collaboration with change control
- Maintain a reproducible local development environment (WSL2, Azure CLI, GitHub CLI) to support consistent infrastructure operations across the team

Technical Product Manager | Sunsage Limited (Remote) Oct 2025 – April 2026

- Lead cross-functional development of a medical application from requirements through delivery, coordinating engineering, design, and stakeholder input
- Define product requirements, feature scope, and user workflows; translate business needs into technical specifications for the engineering team
- Own product lifecycle management, documentation, and delivery tracking, applying the same structured, detail-first discipline now central to my DevOps practice

FEATURED DEVOPS PROJECTS

Spring PetClinic Microservices — Capstone Project Lead | DMI Cohort-2,

- Led planning and execution for a Java microservices application deployed to **AWS EKS**, managing the project end-to-end in Jira as Project Lead and CI/CD Engineer
- Authored GitHub Actions CI/CD pipelines and managed GitOps-based delivery with **ArgoCD** and **Helm**
- Provisioned infrastructure with Terraform and container images via **ECR**; implemented observability with **Prometheus**, **Grafana**, and **Zipkin**
- Resolved cross-cutting issues including CRLF line-ending conflicts, Docker image naming, EKS node scaling, ArgoCD reinstalls, and a Terraform teardown blocked by residual ECR images and a stale VPC security group
- Separately deployed the same application independently to an EC2 instance after local Docker Compose exceeded available memory, adapting the deployment strategy in real time

EpicBook — Containerized Deployment & CI/CD | DMI Cohort-2

- Containerized a Node.js bookstore application using a **multi-stage Dockerfile**, cutting final image size by over 95%
- Built a Docker Compose stack with isolated networks and an **Nginx** reverse proxy, deployed to an Azure VM
- Achieved a fully green **Azure Pipelines** run using a self-hosted build agent, and separately built a two-repo CI/CD architecture with Terraform and Ansible
- Resolved SSH key path issues, self-hosted agent configuration, and pipeline source naming errors to reach a stable, repeatable deployment

Kubernetes & Cloud Fundamentals Labs | DMI Cohort-2

- Completed AKS LoadBalancer provisioning and Kubernetes autoscaling labs, and static site deployments to AWS using Terraform and Claude Code agentic skills

CERTIFICATIONS & TRAINING

- **DMI Cohort-2 — DevOps & Cloud Engineering**, led by Pravin Mishra — Linux, AWS, Azure, Git, Terraform, Ansible, Docker, Kubernetes (2026); recognized as **Champion of the Week**, Week 9
- **Agentic AI DevOps** — Claude Code, MCP servers, hooks & skills for automated infrastructure workflows (2026)
- **DevOps & Security Training** — Digital Witch IT Training (Jun – Dec 2025)
- **Product Management Fellowship** — Tech4Dev / Women Techsters (2023 – 2024)
- **AI Virtual Assistant Internship** — Elite Global AI (2024)

EDUCATION

Bachelor of Arts (BA), English Language & Literature

University of Benin — Second Class Upper
